unisys

Digital Workplace Solutions

Streamline remote desktop management

Unisys Virtual Desktop Infrastructure

Highlights

Data-driven dynamic workload refresh and planning enabled by virtual desktop infrastructure (VDI) analytics and telemetry data

Modernization of applications and desktops

Machine learning and AI-driven automation of manual processes

IT service management of the entire virtual desktop lifecycle

The latest technology and world-class services at a predictable subscription cost

Global support from Unisys Next-Generation Service Desk and Unisys Frontline Field Services

In the modern digital workplace, employees access corporate content from offices, homes and everywhere in between. They require minimal interruption from device refreshes and software updates. However, traditional solutions are challenging to scale, while shrinking IT budgets and resources make meeting employee demands and corporate security and regulatory mandates difficult.

Delivered as a service, the Unisys Virtual Desktop Infrastructure solution manages your virtual desktops through the entire lifecycle. VDI keeps the latest technologies in the hands of your employees with remote provisioning and de-provisioning. Streamline virtual asset planning and free your IT department from time-consuming tasks like employee onboarding/offboarding and endpoint management.

Empower your workforce with technology, when and where they need it. The VDI-as-a-service solution from Unisys delivers a consistently positive employee experience on any device, with the scalability to adapt deployments and support services as employee and business needs evolve.

Personalized subscription model

Subscribe to the combination of VDI services that best meets your needs while Unisys manages the entire virtual desktop lifecycle.

How you benefit:

Positive remote experience: Allow employees to work from anywhere and benefit from the flexibility of bring your own device (BYOD) and choose your own device (CYOD) initiatives. Unisys Virtual Desktop Infrastructure offers visibility into the performance of remote endpoint devices and a view of all your virtual desktops from a single central location. Support your field and frontline workers, including call center agents, by giving them a consistent and equitable experience.

IT optimization: Free your IT team from manual on-demand provisioning and de-provisioning of virtual desktops. Unisys can help you automate critical processes with integrated ServiceNow workflows, monitor user sessions with digital experience management tools and benefit from self-healing capabilities like virtual machine reboot.

Tighter security: Protect your sensitive information by keeping it in the data center. Deployment, management and monitoring of your virtual desktops – along with authentication and authorization – optimize security. Reduce cyber risk by minimizing your attack surface and not leaving corporate data and applications on user endpoints.

Increased flexibility: Improve employee experience while maintaining financial flexibility and efficiency. The flexible consumption-based model of Unisys Virtual Desktop Infrastructure empowers your workforce to maintain productivity and drive business outcomes. The service is also product agnostic; select your preferred VDI vendor and Unisys will work with you to tailor the solution to your persona groups.

Predictable costs: Save time and money and reap the benefits of VDI immediately without a huge up-front capital investment. The service model provides a more predictable budgetary model with greater economic flexibility. Minimize management and overhead costs and enable business continuity, so you can focus on strategic initiatives and core business tasks.

Employee experience parity

Deliver a seamless digital workplace experience to all employees across devices and locations.

Why Unisys?

Unisys has been recognized by multiple analyst firms, including Forrester, for achievements in the modern digital workplace. The traditional engagement model is no longer suited to meet the technology experience preferences of digital employees. Unisys helps organizations align their business outcomes to key workforce personas so they better support their employees. Partners include AWS, VMware, Google, Lenovo, 1E, Microsoft, Nexthink, Citrix and Dell Tech.
